Rationale

This website is a restaurant reservation platform for Saffron Table. Its purpose is to present the restaurant's dining experiences and allow users to easily browse pages, register, and book reservations online. The site is responsive and includes key features such as navigation, service showcase pages, guest registration, and a reservation system for a smooth user experience.

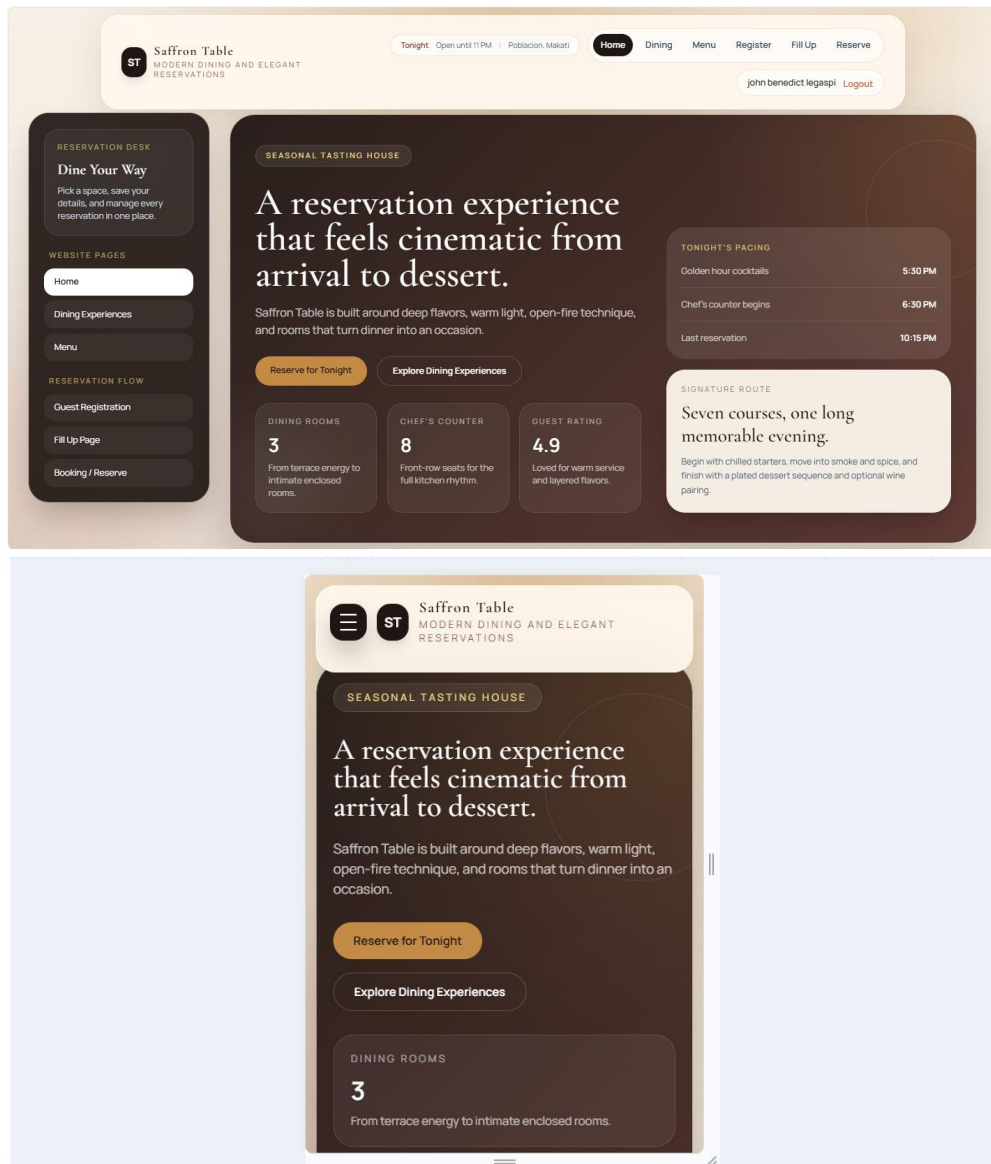

Image 1 – Home Page

The homepage introduces the restaurant and gives users quick access to the main parts of the website. Its buttons help users navigate pages, explore dining experiences, and make reservations, making it the starting point for both browsing and booking.

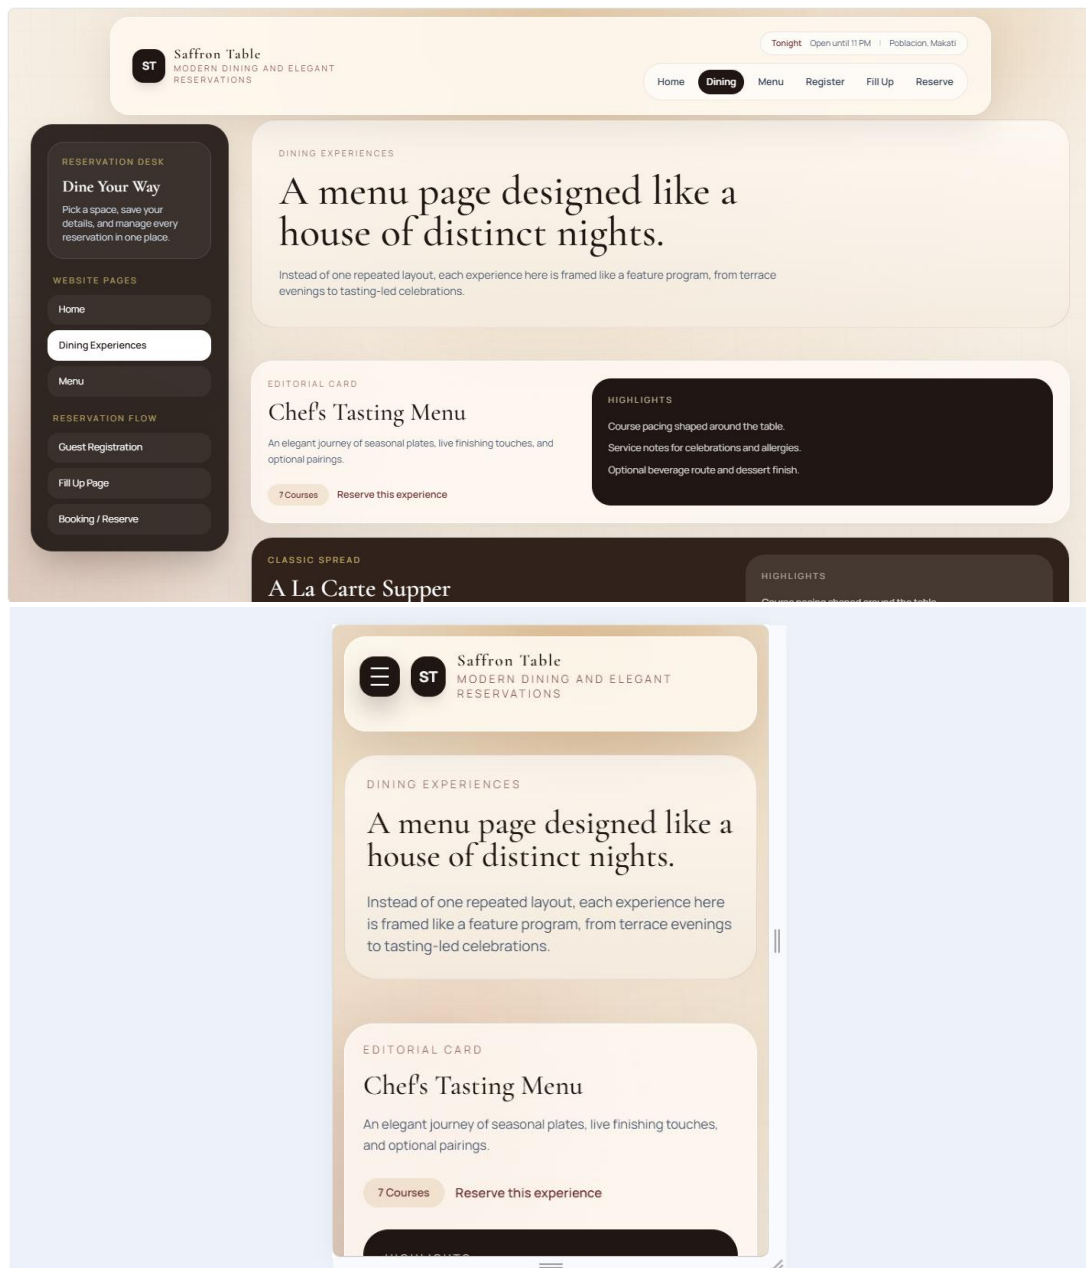

Image 2 – Dining Experiences Page

The Dining Experiences page shows the different services and dining options offered by the restaurant. Its purpose is to help users explore available experiences and guide them to make a reservation based on their preferred dining setup.

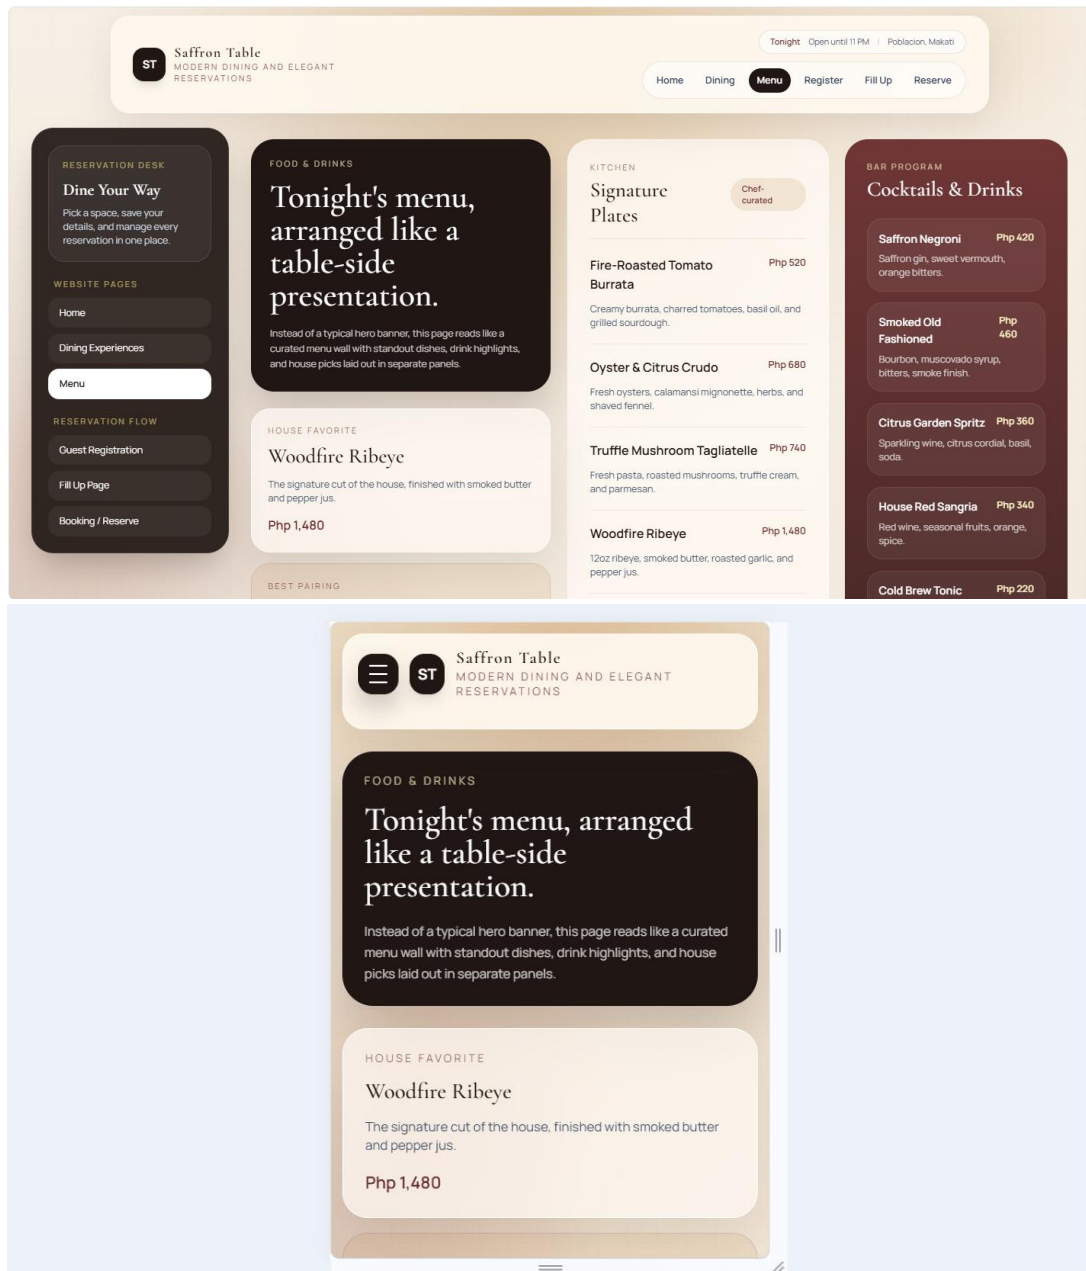

Image 3 – Menu Page

The Menu page displays the restaurant's food and drink offerings. Its purpose is to let users view available items and get an idea of what the restaurant serves before making a reservation.

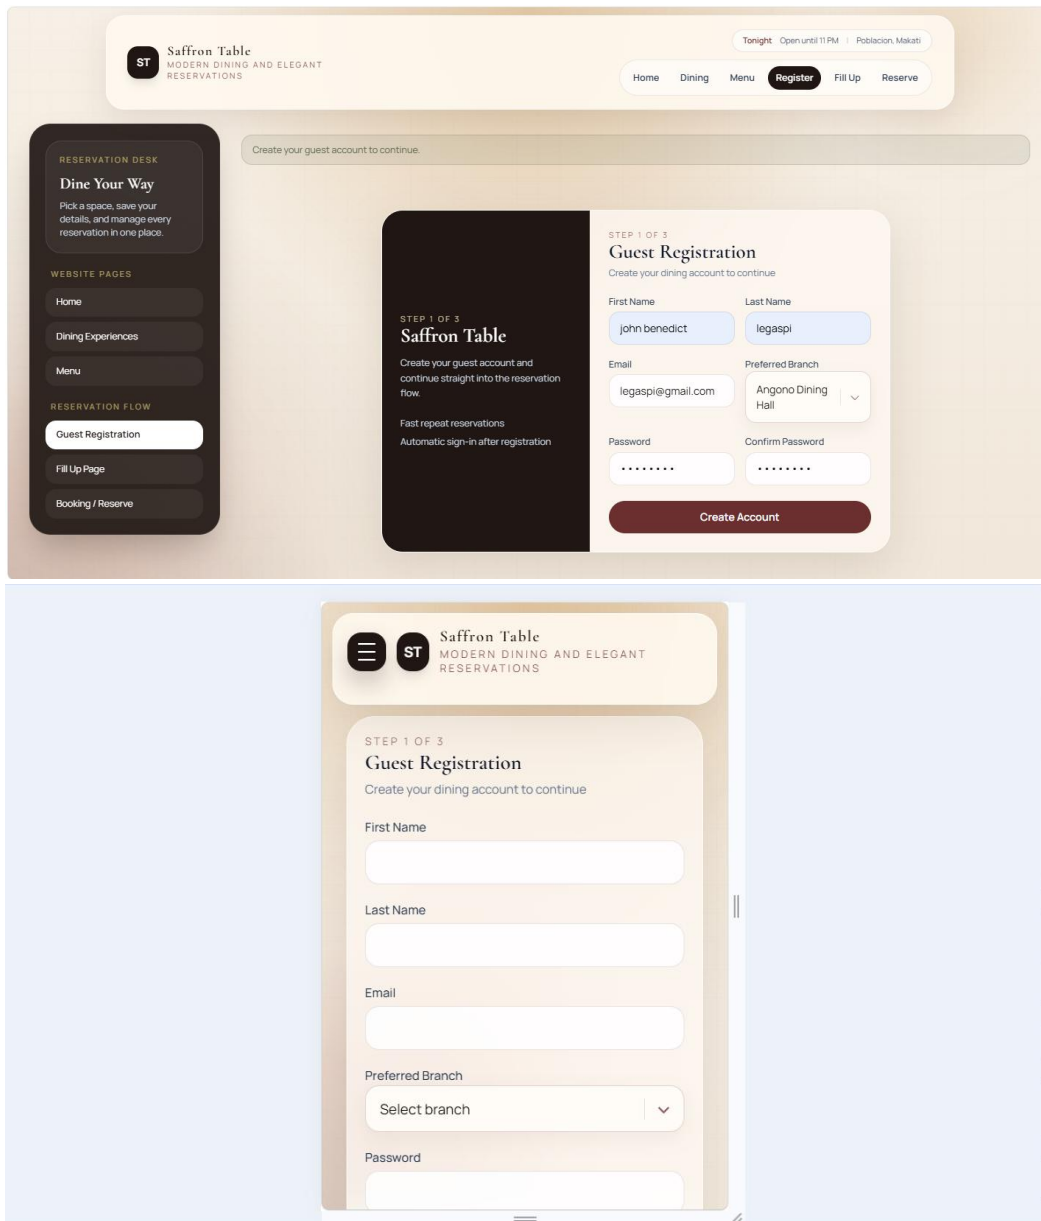

Image 4 – Guest Registration Page

The Guest Registration page allows users to input their data to create user account before making a reservation. Its purpose is to collect the needed information so the system can identify guests and manage their bookings properly. The Create button is used to register a new customer account. After filling out the required information and clicking the button, the system creates the account, allowing the user to access the reservation feature

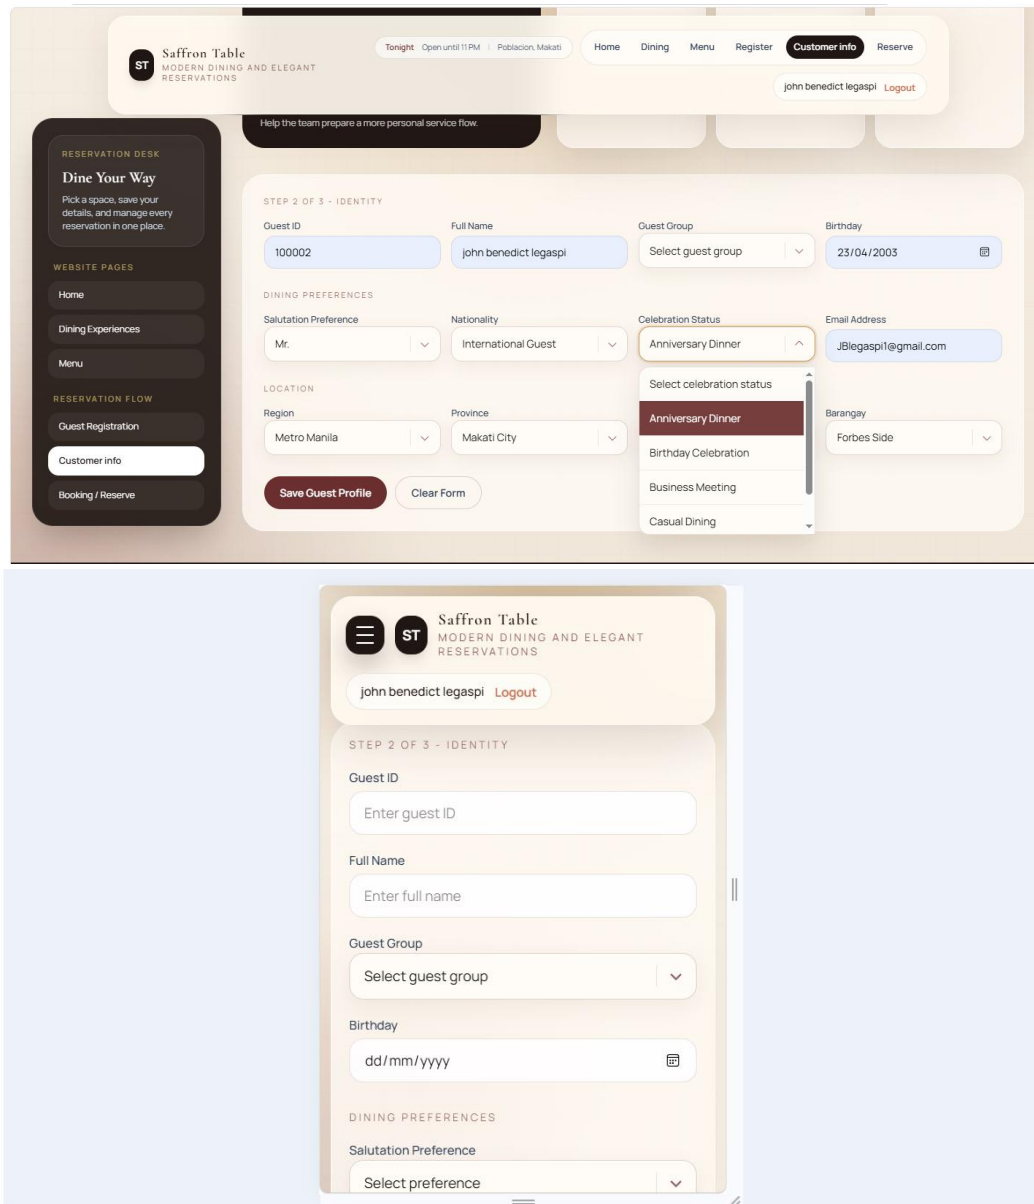

Image 5 – Customer Info Page

The Customer Info page is used to display and manage the customer's personal details. Its function is to keep the user's information organized so it can be used for reservations, identification, and record keeping. The dropdown is used to let the user choose an option from a list, such as a category, service, or reservation detail. the save guest button is to save the guess info that they created, and the clear form button is to clear the information if they have mistaken.

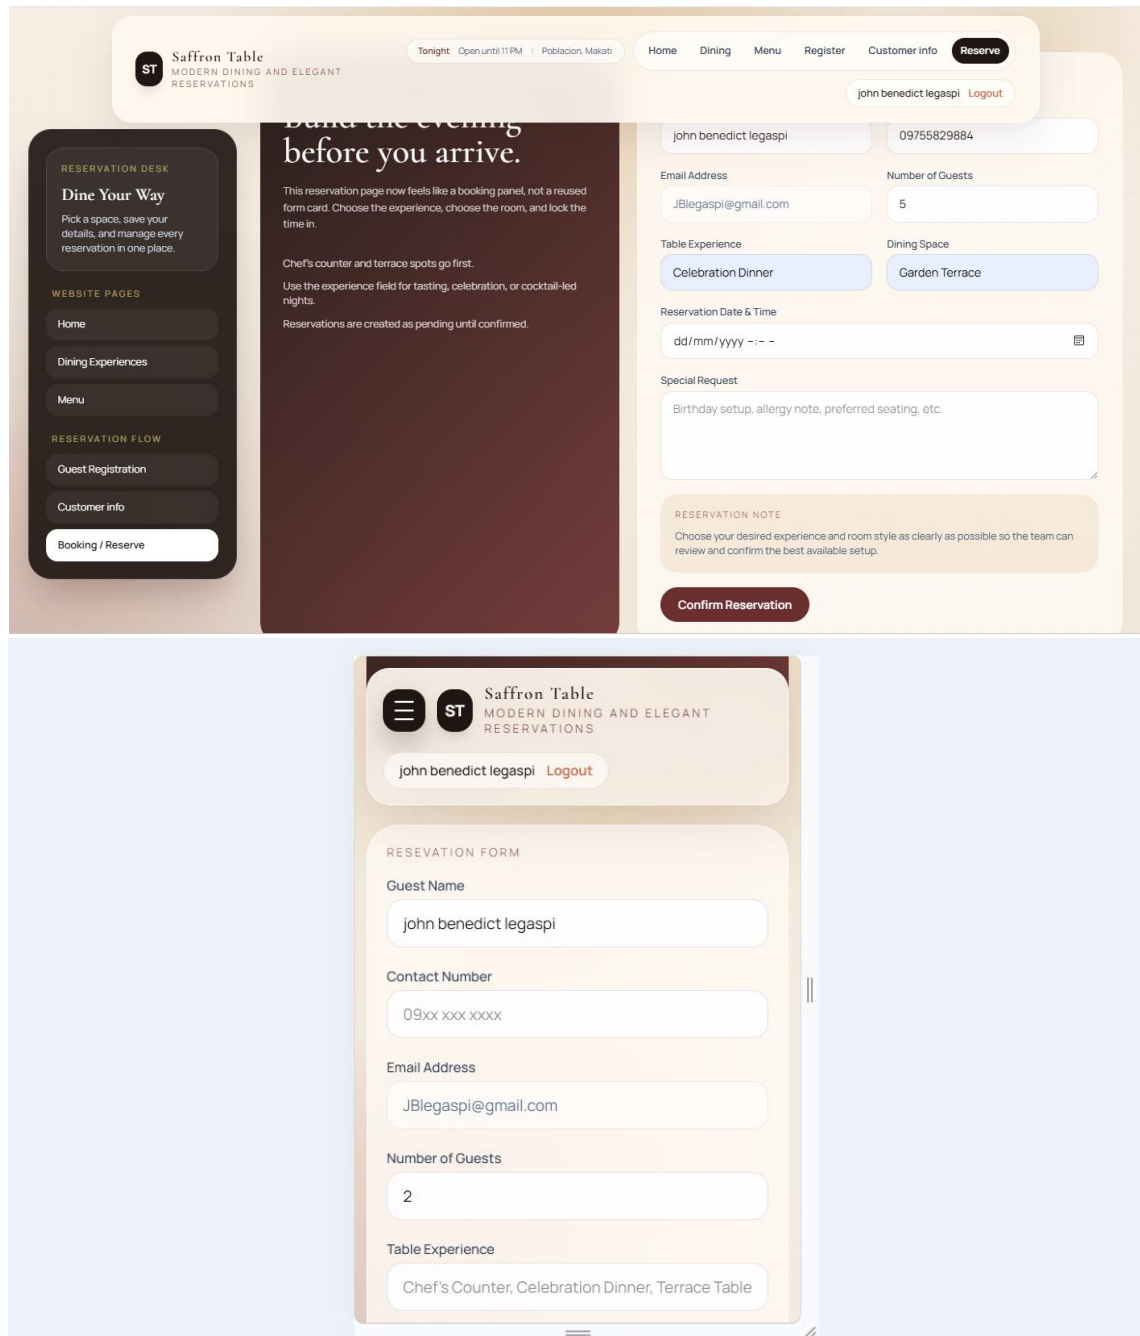

Image 6 – Booking/reservation Page

The Booking/Reservation page allows users to schedule and confirm a table reservation. Its purpose is to collect reservation details such as date, time, and guest information so the restaurant can manage bookings properly. The function of confirm reservation is to submit the reservation form it saves the data to see in the admin reservation management

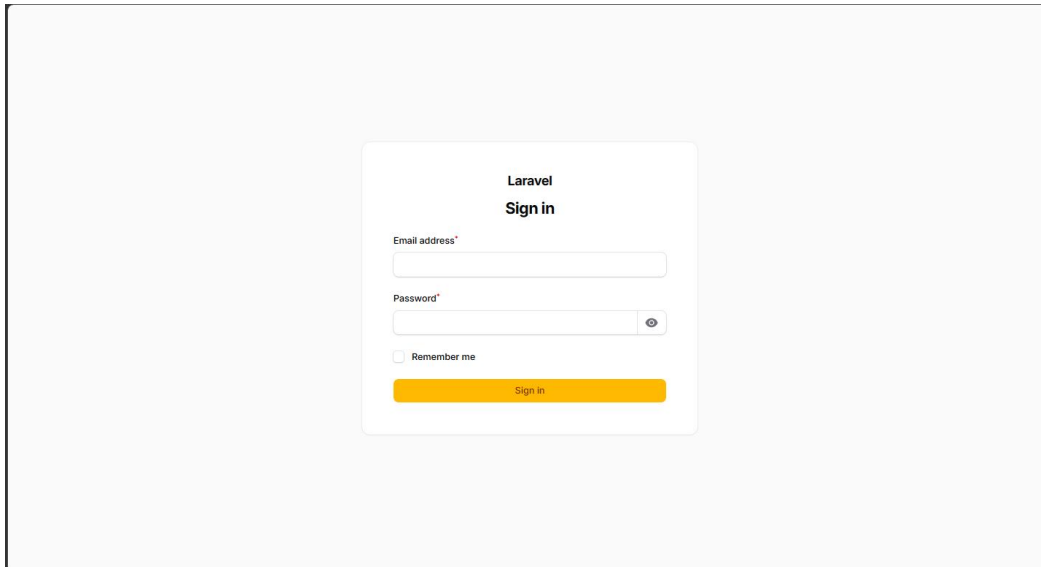

Image 7 – Admin Login Page

The Filament Admin Login page is used by administrators to securely access the admin panel. Its function is to verify admin credentials before allowing access to management features such as records, reservations, and other system data

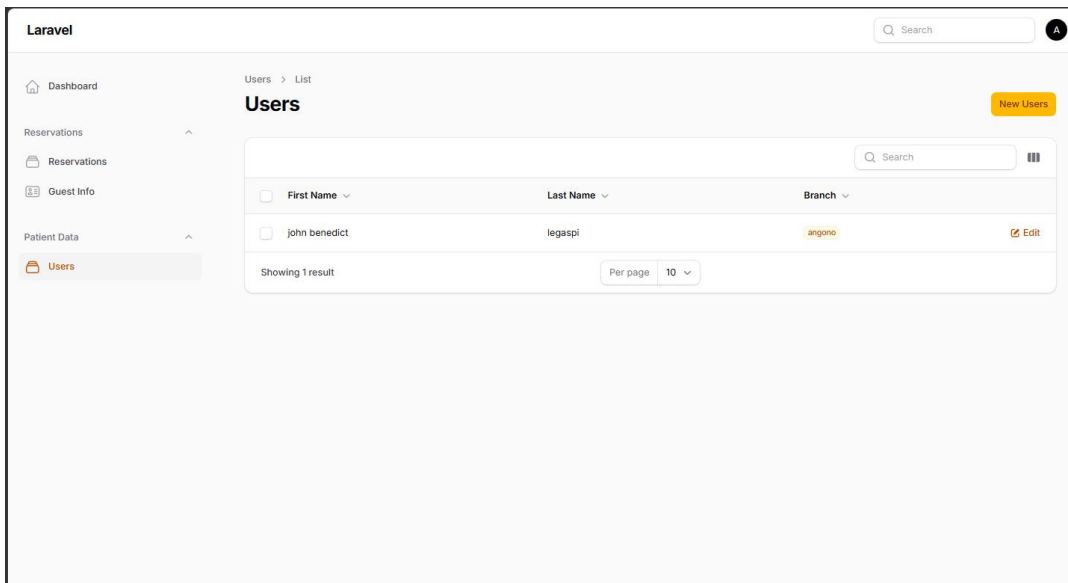

Image 8 – Admin Users Page

The Users page in the admin panel is used to view and manage customer records. Its function is to display user information in a table so the admin can check details, search records, and update existing data when needed.

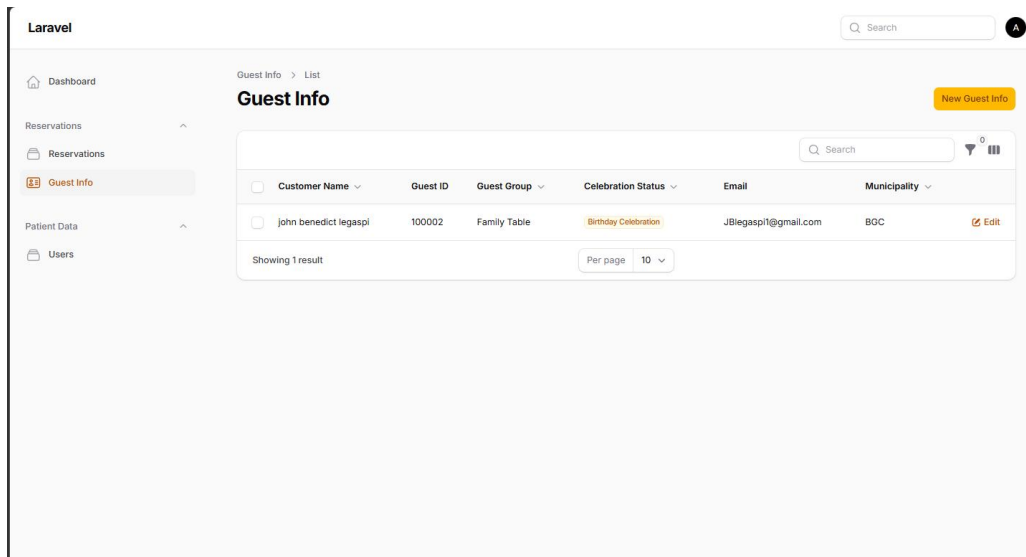

Image 9 – Admin Guest Info Page

The Guest Info page in the admin panel is used to view and manage guest details. Its function is to store important guest information that is input by the guests, making it easier for the admin to organize records and support reservations.

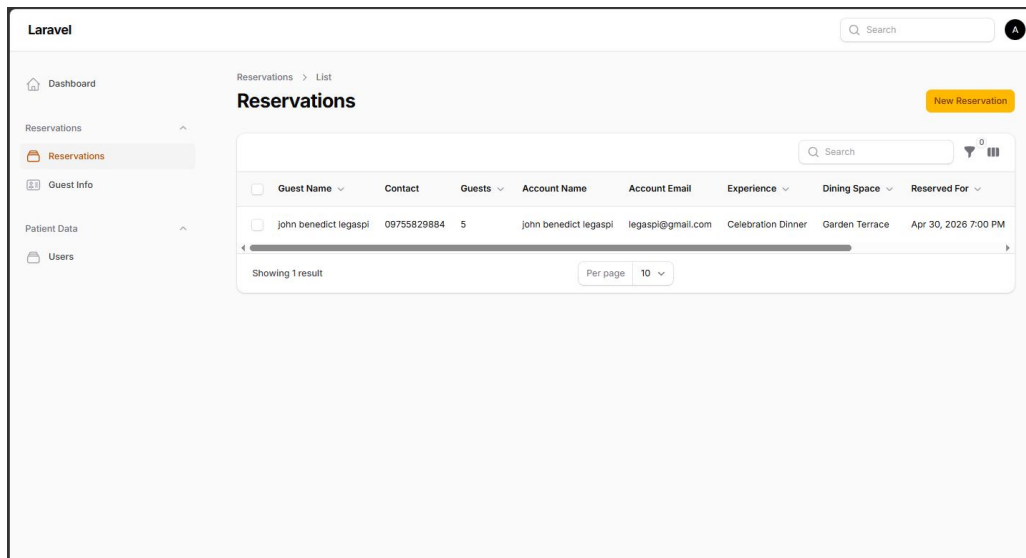

Image 10 – Admin Reservations Page

The Reservations page in the admin panel is used to view and manage all booking records. Its function is to display reservation details information like in the picture, so the admin can organize and monitor bookings easily.
