Rationale

This website called **Healthcare Hospital System**, it is a hospital management system designed to provide a modern, user-friendly platform where patients can easily access healthcare services. It allows users to view hospital services, explore departments, find doctors, and schedule appointments online. The system also helps in managing patient information and records, making the process more organized and efficient while improving accessibility and convenience for both patients and the hospital.

Functionality

1. Hospital dashboard interface with navigation for Home, Services, Departments, Doctors, Patient Info, Appointments, and Patient Registration.
2. Responsive layout with sidebar navigation, navbar with quick links and profile access, and footer with hospital contact information.
3. Home page with overview of hospital services, live capacity status, average waiting time, and quick access buttons for booking appointments and viewing doctors.
4. Services page that displays different medical services with descriptions and schedule options for patients.
5. Departments page that shows hospital departments with descriptions and request visit functionality.
6. Doctors page that lists doctors with specialization, availability, and booking options.
7. Appointments page that allows users to view, track, and manage their scheduled appointments.
8. Patient Information page that serves as the user's profile center, displaying and collecting personal details through a structured form with dropdowns.
9. Patient Registration page that allows users to create an account by entering personal credentials such as name, email, and password.
10. Admin Panel for managing patient records, appointments, and system data (list, create, edit).

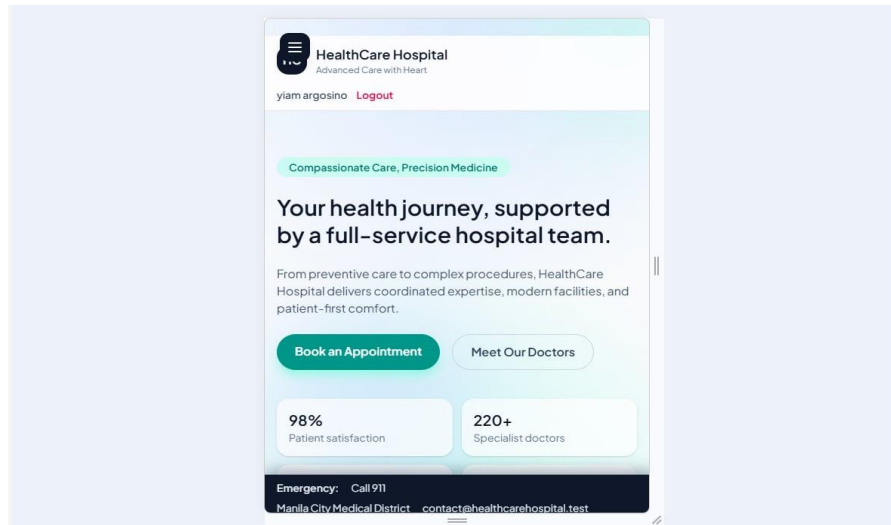

Figure 1 – Home Page

The Home page serves as the main overview of the hospital system. It highlights important information such as hospital services, live capacity status, and average waiting time so users can quickly understand the current situation of the hospital. It also provides quick access buttons like “Book Appointment” and “Meet Our Doctors” to guide users in navigating the system. The function of the Book Appointment button is to redirect users to the appointment page where they can schedule a visit.

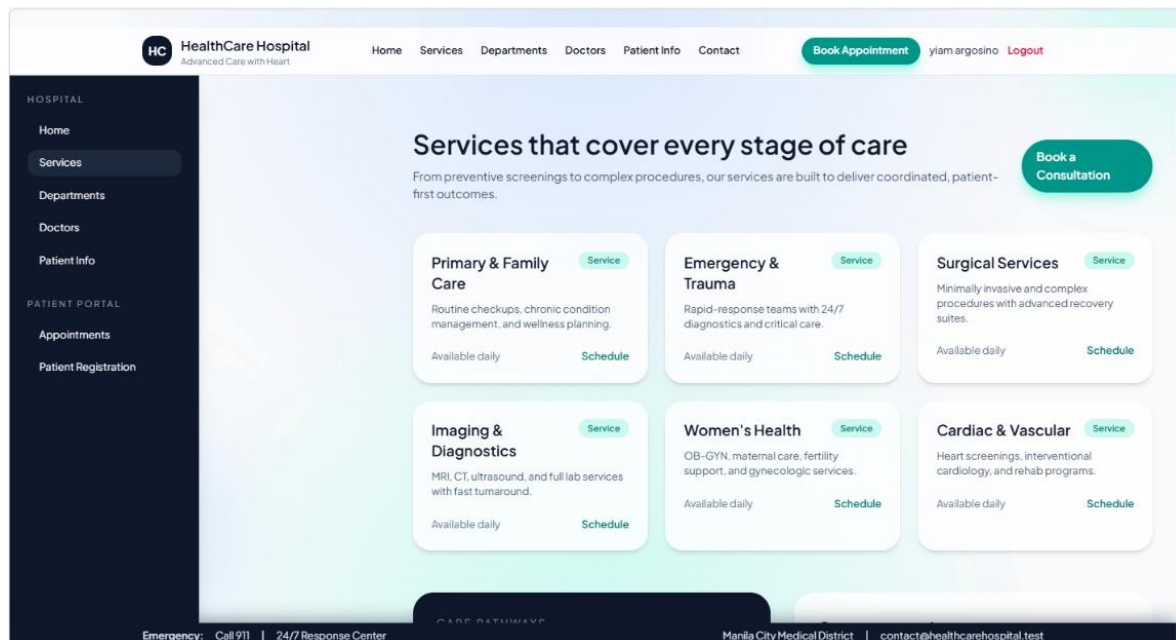

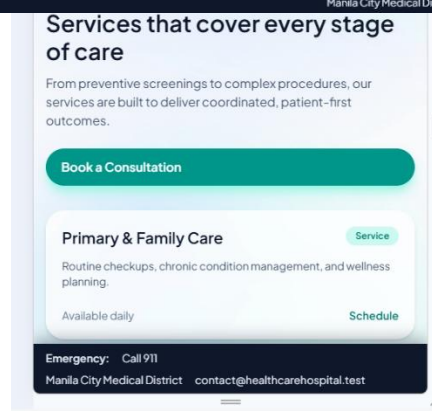

Figure 2 – Services Page

The Services page
medical services

displays the different
offered by the hospital.

Each service includes a short description and availability to help users understand the type of care they can receive. The function of the schedule button is to allow users to proceed to booking an appointment based on the selected service.

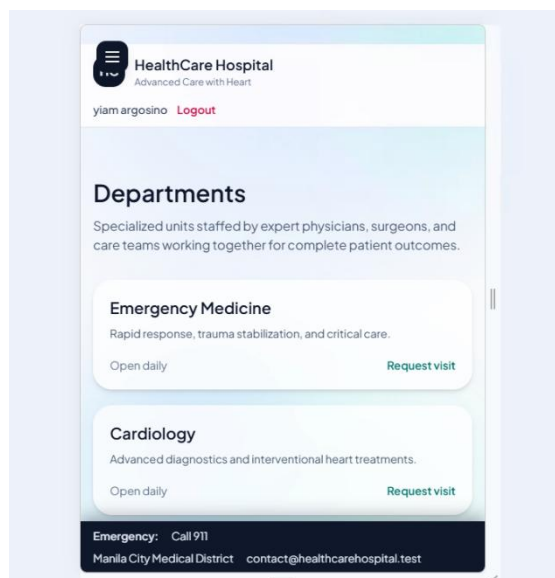

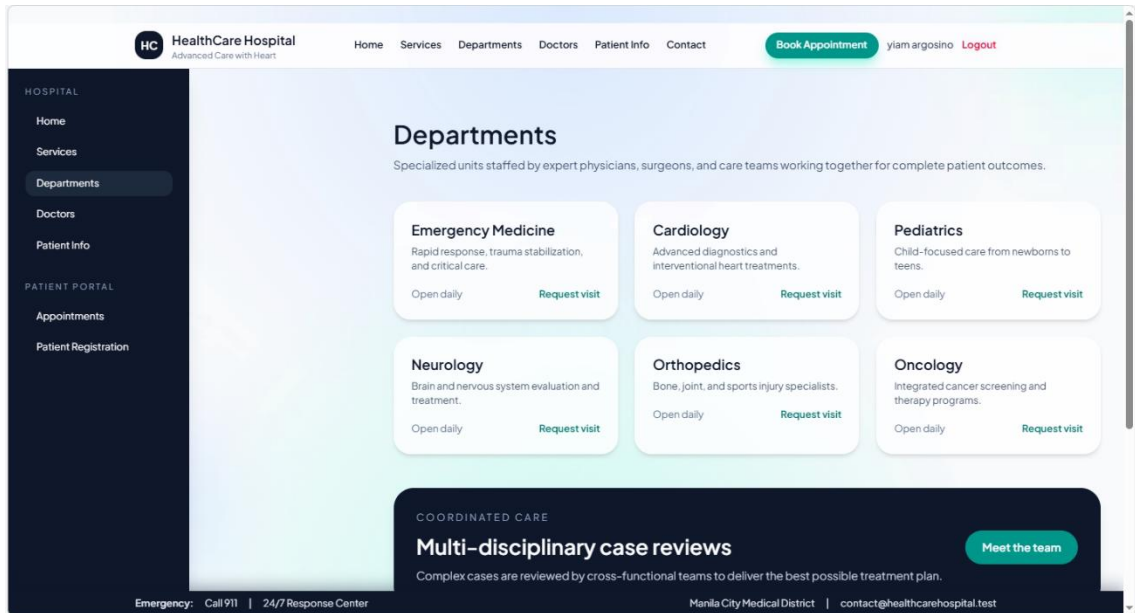

Figure 2 – Departments Page

The Departments page shows the different hospital departments such as Cardiology, Pediatrics, and Neurology. It helps users identify the appropriate department for their medical needs. The function of the request visit button is to redirect users to the appointment system for scheduling.

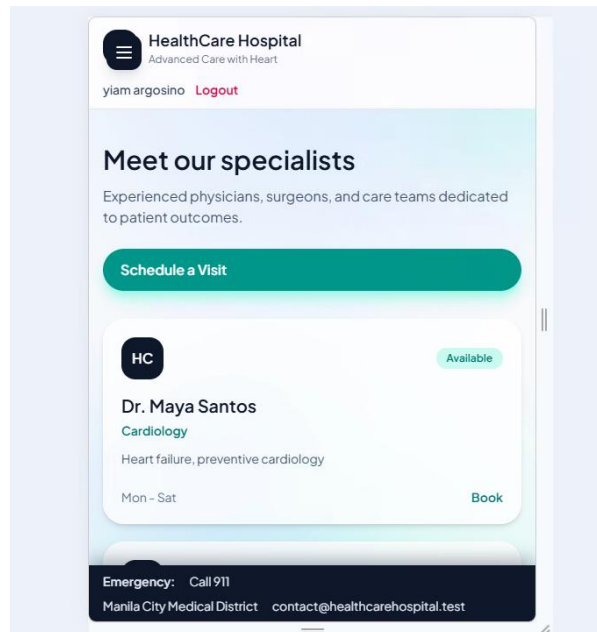

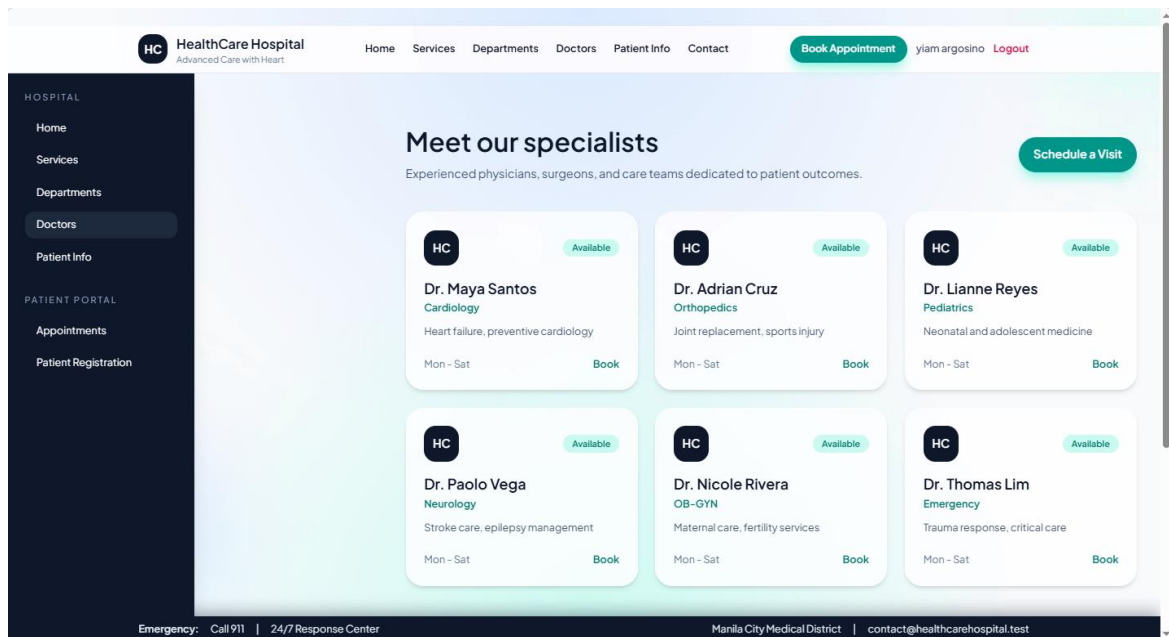

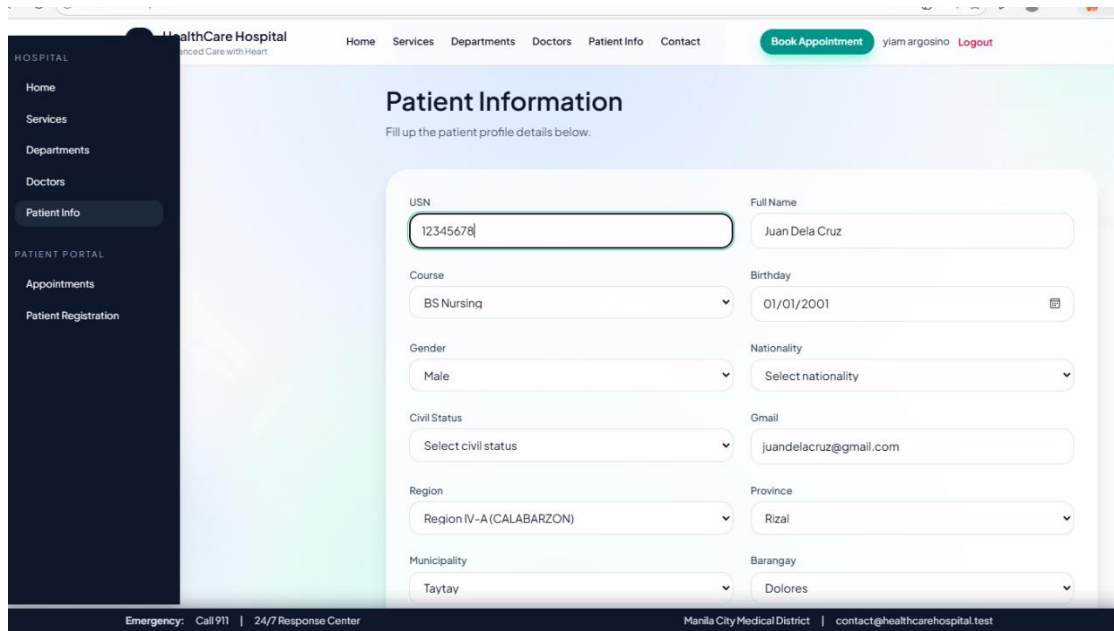

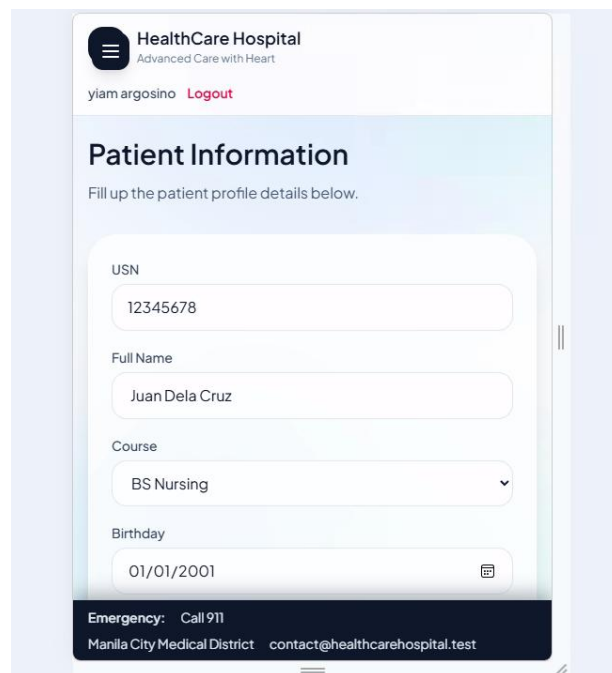

Figure 4 – Doctors Page

The Doctors page lists all available doctors along with their specialization and availability status. This allows users to choose the right doctor for their needs. The

function of the book button is to allow users to directly schedule an appointment with the selected doctor.

The desktop view of the Patient Information page features a dark blue sidebar on the left with navigation links: HOSPITAL (Home, Services, Departments, Doctors, Patient Info), PATIENT PORTAL (Appointments, Patient Registration), and a top navigation bar with Home, Services, Departments, Doctors, Patient Info, and Contact. A green 'Book Appointment' button and user info 'yiam argosino Logout' are in the top right. The main content area is titled 'Patient Information' with the instruction 'Fill up the patient profile details below.' The form contains the following fields: USN (12345678), Full Name (Juan Dela Cruz), Course (BS Nursing), Birthday (01/01/2001), Gender (Male), Nationality (Select nationality), Civil Status (Select civil status), Email (juandelacruz@gmail.com), Region (Region IV-A (CALABARZON)), Province (Rizal), Municipality (Taytay), and Barangay (Dolores). The footer includes 'Emergency: Call 911 | 24/7 Response Center' and 'Manila City Medical District | contact@healthcarehospital.test'.

The mobile view of the Patient Information page shows a simplified layout with a hamburger menu icon in the top left. The header includes the 'HealthCare Hospital' logo and tagline 'Advanced Care with Heart', user info 'yiam argosino Logout', and the page title 'Patient Information' with the instruction 'Fill up the patient profile details below.' The form fields are: USN (12345678), Full Name (Juan Dela Cruz), Course (BS Nursing), and Birthday (01/01/2001). The footer contains 'Emergency: Call 911' and 'Manila City Medical District | contact@healthcarehospital.test'.

Figure 5 – Patient Information Page

The Patient Information page serves as the user's profile center. It allows users to input and update their personal details such as name, gender, birthdate, contact information, and address. The structured form ensures accurate data collection and proper patient record management.

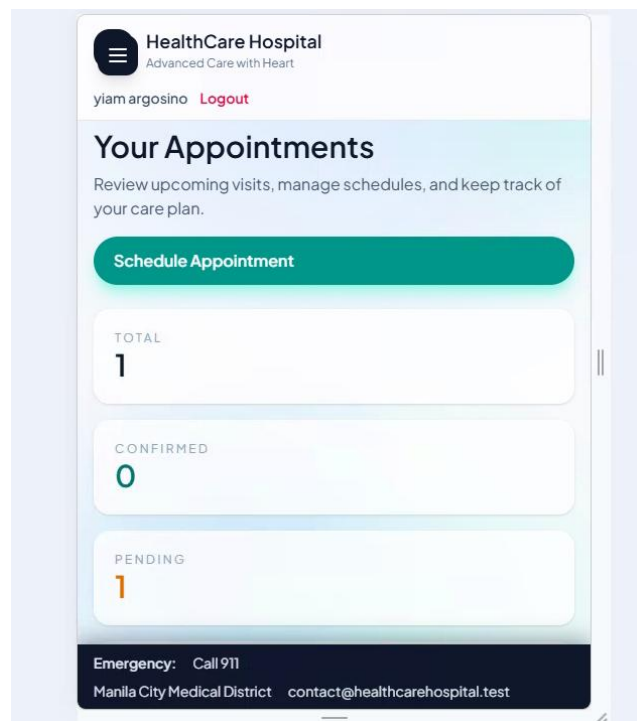

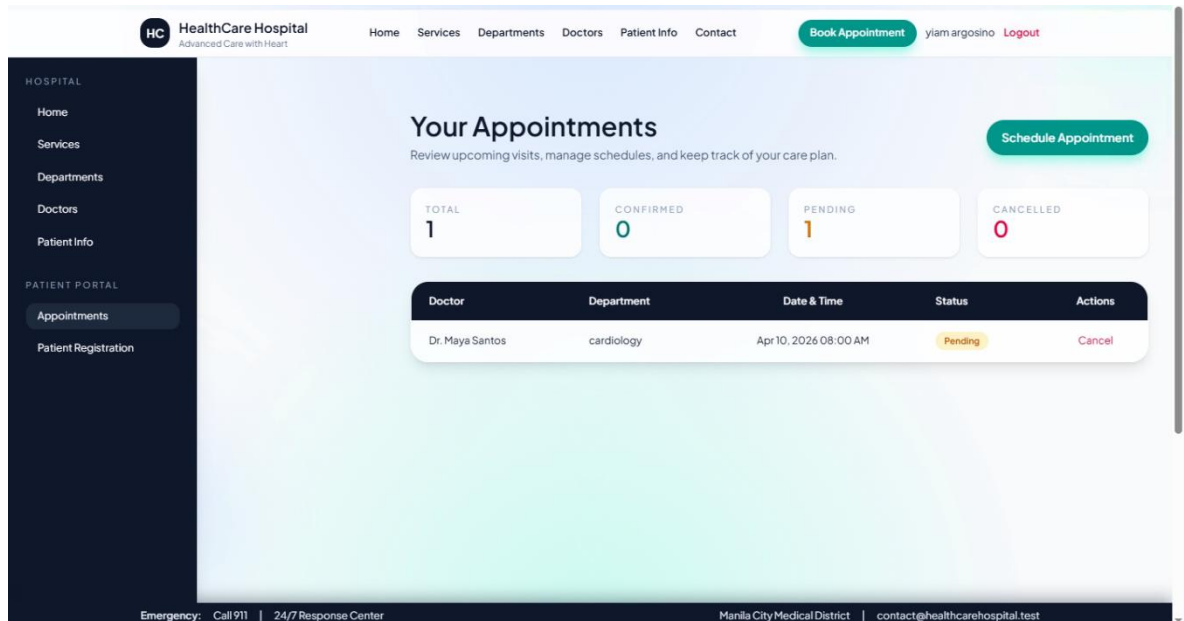

Figure 6 - Appointments Page

The Appointments Page allows patients to view, manage, and track their scheduled visits within the hospital system. It displays a list of appointments along with details such as the assigned doctor, department, date and time, and current status (e.g., pending, confirmed, or cancelled).

The screenshot shows the desktop version of the HealthCare Hospital Patient Registration page. The header includes the hospital logo, navigation links (Home, Services, Departments, Doctors, Patient Info, Contact), a 'Book Appointment' button, and a user profile section for 'yiam argosino' with a 'Logout' link. A dark sidebar on the left contains links for 'HOSPITAL' (Home, Services, Departments, Doctors, Patient Info) and 'PATIENT PORTAL' (Appointments, Patient Registration). The main content area features a large dark card with the hospital name and a description of the patient portal benefits. To the right is the registration form with fields for First Name, Last Name, Email, Preferred Branch (a dropdown menu), Password, and Confirm Password.

Figure 7 – Patient Registration Page

The Patient Registration page is used to create a new user account. It collects basic information such as name, email, and password. This is used so users can access the system, manage their profile, and schedule appointments.

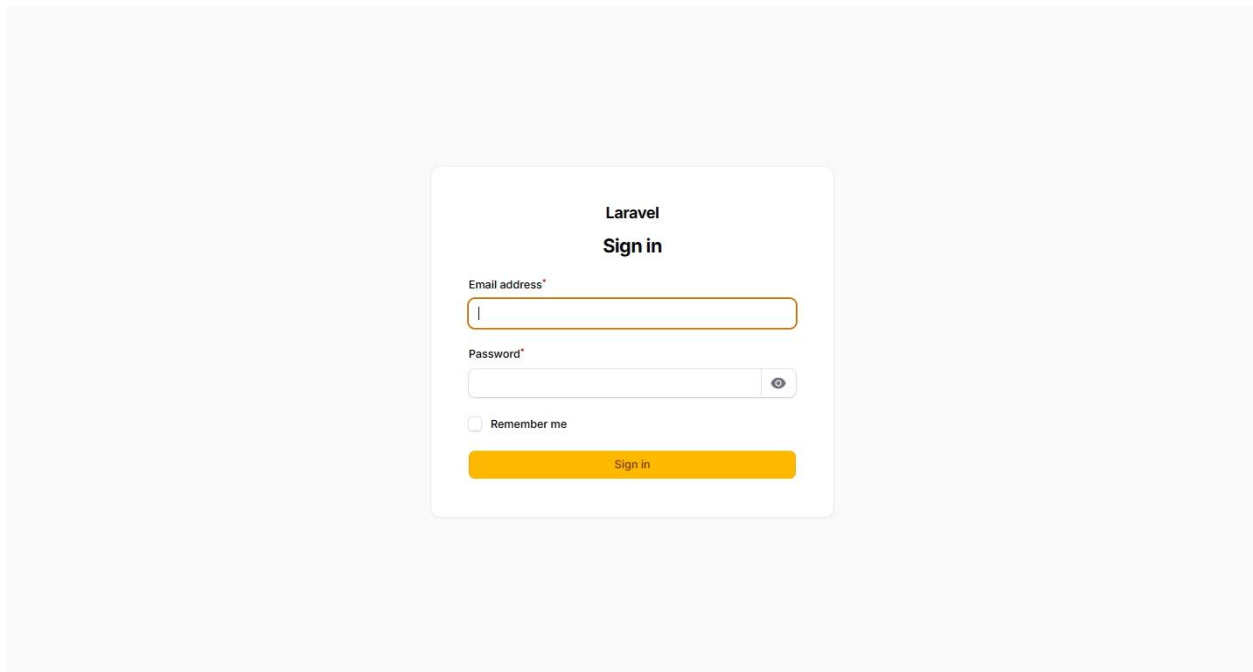

Figure 8 – Admin Login Page

This page lets authorized user's login to access the Filament admin panel and manage system data

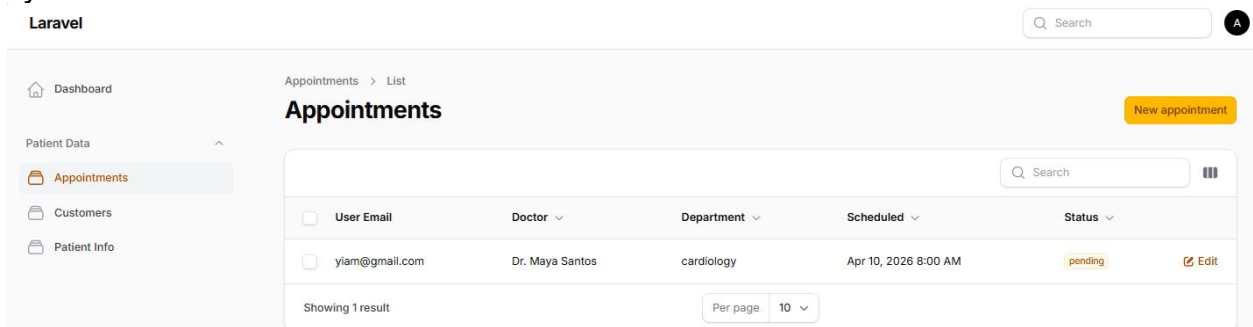

Figure 9 – Admin's Appointment Page

This page manages appointments data. These are stored in the database and then displayed on the Blade pages so the users can see their appointments information at the front end.

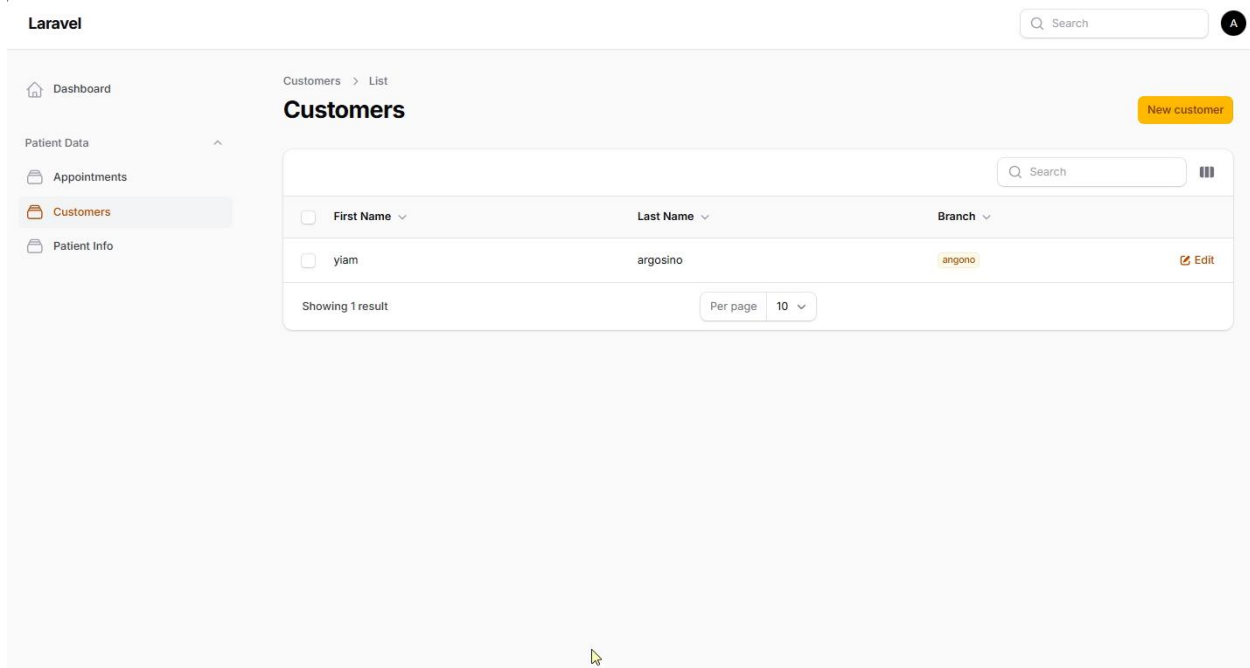

Figure 10 – Customer's Page

This page manages user records. Admins can create, view, and edit user's information such as first name, surname, etc.

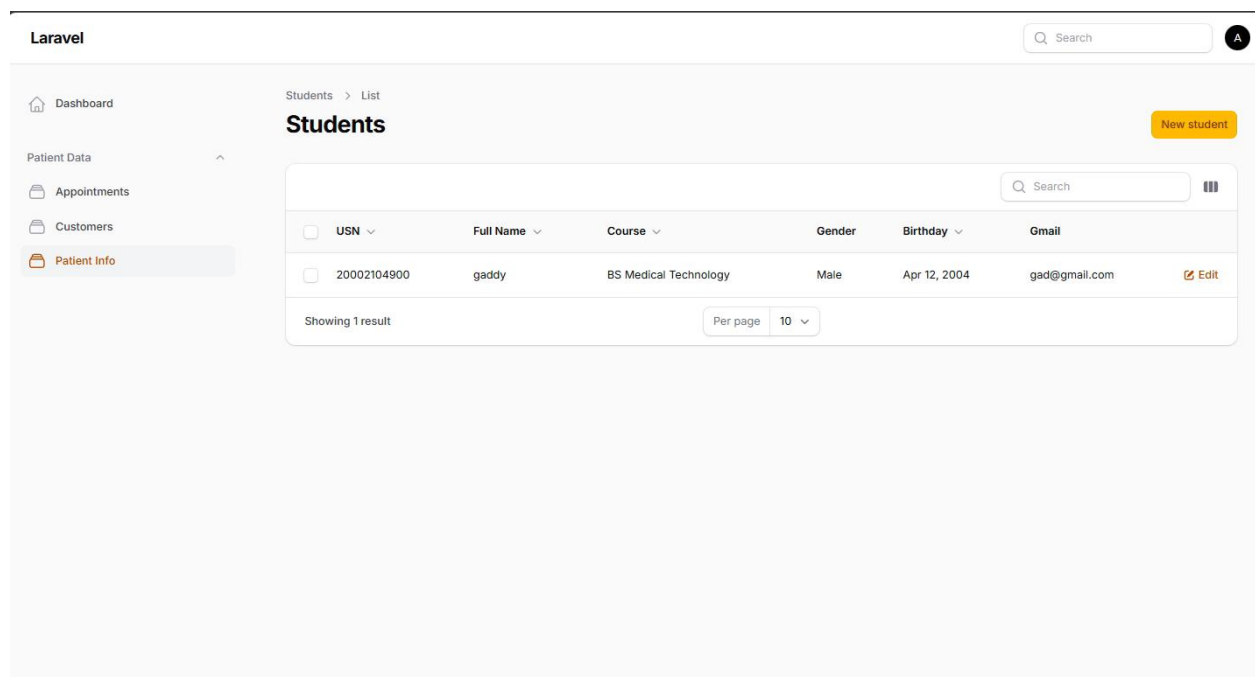

Figure 11 – Student's Page

This page lists student's profiles in the admin panel. It lets admin view key details and edit student's information to ensure if it's complete and accurate
